

Radio Astronomy Supplies
APPLICATION NOTE 7
INEXPENSIVE ANTENNA MOVER

KTI - ProForm H180

The KTI is an inexpensive alternative to antenna (declination) movement. Below is a modified illustration, showing how this unit may be adapted for use with a standard dish antenna. Pricing is reasonable and in the area of around \$400.00.

Some slight modification may be required, for the final adaptation and securing to the pole support.

Contact KTI at: http://www.ktidish.com/C-band_antennas.htm

The ProForm H180 mount provides horizon to horizon and inclined orbit tracking capabilities. This mount will support up to a 12 foot diameter reflector. The ten count per degree resolution assures repeatable pointing accuracy. Please specify reflector size when ordering.

Standard Pole Support

Move collar to a vertical position and mount on pole. Secure were needed and tighten in the vertical position.
